**NOTES TO
Equipment Proposal**

December 1, 2022

- 1. Any necessary permitting is the responsibility of others.
- 2. Professional engineering stamps are not included in the pricing.
- 3. Additional equipment, parts, installation materials, and services may be required that are not detailed in this equipment proposal. The customer is responsible for the cost of these additional items.
- 4. With Manure Thickeners and Separators, the separation rate decreases as the percent solids in the influent increases. Separation efficiency is also related to general manure quality. In some cases, additional treatment steps such as bio-augmentation, aeration, chemical treatment and/or multi-stage lagoon systems must occur in order to provide sufficient influent quality.
- 5. The manure slurry furnished to all manure separators and thickeners must be a consistent, homogenous mix.
- 6. Customer assumes full responsibility in regards to mastitis, somatic cell counts, etc. and agrees to not claim any damages from NCS in regard to those issues.
- 7. The customer is responsible for damage due to freezing.
- 8. Customer assumes responsibility for the bedding material and its ability to pass through pumps and the separation equipment. Certain bedding materials can impair pump and separator performance and may also impact the potential dry matter of the separated solid product.
- 9. Above pricing is good for 30 days from date of quotation.
