Variable Frequency Drive 20HP CT 31.7 Amp 380-480V 3PH Chassis  
Manufacturer: YASKAWA AMERICA Weight: 10.37 lbs.  
This is an IP20 enclosure which must be housed in a NEMA rated enclosure.  
To convert to NEMA 1 use kit ZBAA-GA50V6-1 (sold separately)

20 HP Constant Torque (Heavy Duty) 31.0A  
25 HP Variable Torque (Normal Duty) 38.0A  
Control Methods: Volts/Hz or Open Loop Vector  
UL maximum recommended fuses:  
AJT60 (J class fuse) typically used inside a control panel with fuseblock  
US6J3I  
J class fuses have the fastest interrupting rating, and dimensionally smaller than class H fuses  
or  
Yaskawa does not recommend RK1 or RK5 fuses for this VFD size. Use Class J Fuses instead  
If requiring a new fusible disconnect/safety switch, DH362F\*K & J FUSE CLIP PT# DS26JK  
We would need the environment to properly select a NEMA rating  
NOTE: If VFD will be mounted external from an enclosure using its Nema 1 Kit, RK1 fusing  
IS NOT recommended by Yaskawa as it will violate UL & NEC.

Additional 1 Year Warranty available with ErieTec paid Start-Up

++Ask your ErieTec Solutions Specialist how you can get this drive installed in an enclosure by our UL508A panel shop division, EB Controls
